INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY OF THE PROTECT O

(Chapter II of the Patent Cooperation Treaty)
(PCT Article 36 and Rule 70)

PO POT

Applicant's or agent's file reference See Form PCT/IPEA/416 FOR FURTHER ACTION 0815-044246 International application No. International filing date (day/month/year) Priority date (day/month/year) PCT/US04/19495 18 June 2004 (18.06.2004) 20 June 2003 (20.06.2003) International Patent Classification (IPC) or national classification and IPC IPC(7): F16J 15/40 and US CL: 277/409, 411, 412, 413, 414, 415, 418 Applicant **ELLIOTT COMPANY** 1. This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36. This REPORT consists of a total of 3 sheets, including this cover sheet. This report is also accompanied by ANNEXES, comprising: (sent to the applicant and to the International Bureau) a total of ___ sheets, as follows: sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions). sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)) , containing a sequence listing and/or tables related thereto, in electronic form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions). 4. This report contains indications relating to the following items: Box No. I Basis of the report Box No. II Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability Box No. IV Lack of unity of invention Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement Box No. VI Certain documents cited Box No. VII Certain defects in the international application Box No. VIII Certain observations on the international application Date of submission of the demand Date of completion of this report 19 April 2005 (19.04.2005) 11 January 2006 (11.01.2006) Name and mailing address of the IPEA/ US Authorized officer. Mail Stop PCT, Attn: IPEA/US Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 Telephone No. (571)-272-5150 Facsimile No. (571) 273-3201

Form PCT/IPEA/409 (cover sheet)(April 2005)

INTERNATIONAL	PRELIMINARY REPOR	T ON DATENTABILITY
INTERNATIONAL	FRELLIVILIVARY REPUBL	I UN PAIENTABILITY

-	International application No.	
	PCT/US04/19495	

Box No. I Basis of the report					
1. With regard to the language, this report is based on:					
the international application in the language in which it was filed.					
a translation of the international application into <u>English</u> , which is the language of a translation furnished for the purposes of:					
international search (under Rules 12.3 and 23.1(b))					
publication of the international application (under Rule 12.4(a))					
international preliminary examination (under Rules 55.2(a) and/or 55.3(a))					
2. With regard to the elements of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report):					
the international application as originally filed/furnished					
the description:					
pages 1 and 2 as originally filed/furnished					
pages* NONE received by this Authority on pages* NONE received by this Authority on					
57					
the claims: pages 3as originally filed/furnished					
pages* NONE as amended (together with any statement) under Article 19					
pages* NONE received by this Authority on					
pages* NONE received by this Authority on					
the drawings:					
pages 1/3-3/3 as originally filed/furnished					
pages* NONE received by this Authority on pages* NONE received by this Authority on					
a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.					
3. The amendments have resulted in the cancellation of:					
the description, pages NONE					
the claims, Nos. <u>NONE</u>					
the description, pages NONE the claims, Nos. NONE the drawings, sheets/figs NONE the sequence listing (specify): NONE any table(s) related to the sequence listing (specify): NONE					
the sequence listing (specify): NONE					
any table(s) related to the sequence listing (specify): NONE					
4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).					
the description, pages					
the claims, Nos.					
the drawings, sheets/figs					
the sequence listing (specify):					
any table(s) related to the sequence listing (specify):					
f fitem 4 applies, some or all of those sheets may be marked "superseded." The PCT/IPEA/409 (Box No. I) (April 2005)					

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/US04/19495

Novelty (N) Claims 2 and 4 Claims 1 and 3 NO Inventive Step (IS) Claims NONE Claims 1-4 NO Industrial Applicability (IA) Claims 1-4 Claims NONE Claims NONE Claims NONE NO 2. Citations and Explanations (Rule 70.7) Claims 1 and 3 lack novelty under PCT Article 33(2) as being anticipated by Wieghardt (U.S. Patent Application Publication No. 2003/0107181) Wieghardt discloses an apparatus (Fig. 2) for restricting axial leakage flow through the clearance between a rotating shaft (1) and a seal stator (2) and providing necessary damping to improve rotor stability comprising: the shaft having a stepped surface (receiving 6), the surface having a plurality of sections of a first diameter and a plurality of sections of a second lesser diameter being interleaved and adjacent (Fig. 2); the seal stator has a plurality of damper sections (7) and a plurality of labyrinth sections (5) being interleaved and adjacent (Fig. 2). The damper segments are honeycomb segments (page 1, paragraph no. [0008], line 8). Claims 2 and 4 lack an inventive step under PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.	Novelty (N)	Claims		
Inventive Step (IS) Claims 144 NO Industrial Applicability (IA) Claims 14 Claims 100 Claims 14 Claims 100		Claims		
Inventive Step (IS) Claims NONE Claims 1-4 NO Industrial Applicability (IA) Claims 1-4 Claims NONE Claims NONE Claims NONE Claims NONE NO 2. Citations and Explanations (Rule 70.7) Claims 1 and 3 lack novelty under PCT Article 33(2) as being anticipated by Wieghardt (U.S. Patent Application Publication No. 2003/0107181) Wieghardt discloses an apparatus (Fig. 2) for restricting axial leakage flow through the clearance between a rotating shaft (1) and a seal stator (2) and providing necessary damping to improve rotor stability comprising: the shaft having a stepped surface (receiving 6), the surface having a plurality of sections of a first diameter and a plurality of sections of a second lesser diameter being interleaved and adjacent (Fig. 2); the seal stator has a plurality of damper sections (7) and a plurality of labyrinth sections (5) being interleaved and adjacent (Fig. 2). The damper segments are honeycomb segments (page 1, paragraph no. [0008], line 8). Claims 2 and 4 lack an inventive step under PCT Article 33(3) as being obvious over Wieghardt. Slotted pocket segments and hole pattern segments are recognized art equivalents of a honeycomb segment. Claims 1-4 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.				
Industrial Applicability (IA) Claims 1-4 Claims 1 and 3 lack novelty under PCT Article 33(2) as being anticipated by Wieghardt (U.S. Patent Application Publication No. 2003/0107181) Wieghardt discloses an apparatus (Fig. 2) for restricting axial leakage flow through the clearance between a rotating shaft (1) and a seal stator (2) and providing necessary damping to improve rotor stability comprising: the shaft having a stepped surface (receiving 6), the surface having a plurality of sections of a first diameter and a plurality of sections of a second lesser diameter being interleaved and adjacent (Fig. 2); the seal stator has a plurality of damper sections (7) and a plurality of labyrinth sections (5) being interleaved and adjacent (Fig. 2). The damper segments are honeycomb segments (page 1, paragraph no. [0008], line 8). Claims 2 and 4 lack an inventive step under PCT Article 33(3) as being obvious over Wieghardt. Slotted pocket segments and hole pattern segments are recognized art equivalents of a honeycomb segment. Claims 1-4 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.		Claims	1 and 3	NO
Industrial Applicability (IA) Claims 1-4 Claims NONE Claims NONE Claims 1-4 Claims NONE Claims 1-4 Claims NONE Claims 1-4 Claims NONE Claims 1-4 Claims	Inventive Step (IS)	Ciaiiiis	NONE	YES
2. Citations and Explanations (Rule 70.7) Claims 1 and 3 lack novelty under PCT Article 33(2) as being anticipated by Wieghardt (U.S. Patent Application Publication No. 2003/0107181) Wieghardt discloses an apparatus (Fig. 2) for restricting axial leakage flow through the clearance between a rotating shaft (1) and a seal stator (2) and providing necessary damping to improve rotor stability comprising: the shaft having a stepped surface (receiving 6), the surface having a plurality of sections of a first diameter and a plurality of sections of a second lesser diameter being interleaved and adjacent (Fig. 2); the seal stator has a plurality of damper sections (7) and a plurality of labyrinth sections (5) being interleaved and adjacent (Fig. 2). The damper segments are honeycomb segments (page 1, paragraph no. [0008], line 8). Claims 2 and 4 lack an inventive step under PCT Article 33(3) as being obvious over Wieghardt. Slotted pocket segments and hole pattern segments are recognized art equivalents of a honeycomb segment. Claims 1-4 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.		Claims	1-4	NO
 Citations and Explanations (Rule 70.7) Claims 1 and 3 lack novelty under PCT Article 33(2) as being anticipated by Wieghardt (U.S. Patent Application Publication No. 2003/0107181) Wieghardt discloses an apparatus (Fig. 2) for restricting axial leakage flow through the clearance between a rotating shaft (1) and a seal stator (2) and providing necessary damping to improve rotor stability comprising: the shaft having a stepped surface (receiving 6), the surface having a plurality of sections of a first diameter and a plurality of sections of a second lesser diameter being interleaved and adjacent (Fig. 2); the seal stator has a plurality of damper sections (7) and a plurality of labyrinth sections (5) being interleaved and adjacent (Fig. 2). The damper segments are honeycomb segments (page 1, paragraph no. [0008], line 8). Claims 2 and 4 lack an inventive step under PCT Article 33(3) as being obvious over Wieghardt. Slotted pocket segments and hole pattern segments are recognized art equivalents of a honeycomb segment. Claims 1-4 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry. 	Industrial Applicability (IA)	Claims	1-4	YES
Claims 1 and 3 lack novelty under PCT Article 33(2) as being anticipated by Wieghardt (U.S. Patent Application Publication No. 2003/0107181) Wieghardt discloses an apparatus (Fig. 2) for restricting axial leakage flow through the clearance between a rotating shaft (1) and a seal stator (2) and providing necessary damping to improve rotor stability comprising: the shaft having a stepped surface (receiving 6), the surface having a plurality of sections of a first diameter and a plurality of sections of a second lesser diameter being interleaved and adjacent (Fig. 2); the seal stator has a plurality of damper sections (7) and a plurality of labyrinth sections (5) being interleaved and adjacent (Fig. 2). The damper segments are honeycomb segments (page 1, paragraph no. [0008], line 8). Claims 2 and 4 lack an inventive step under PCT Article 33(3) as being obvious over Wieghardt. Slotted pocket segments and hole pattern segments are recognized art equivalents of a honeycomb segment. Claims 1-4 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.		Claims	NONE	NO
NEW CITATIONS	Claims 1 and 3 lack novelty under PCT Article 33(1003/0107181) Wieghardt discloses an apparatus (Fig. 2) and a seal stator (2) and providing necessary damping the shaft having a stepped surface (receive ections of a second lesser diameter being interleave the seal stator has a plurality of damper sefig. 2). The damper segments are honeycomb segments 2 and 4 lack an inventive step und ole pattern segments are recognized art equivalent Claims 1-4 meet the criteria set out in PC	o for restricting as ing to improve ro ing 6), the surfaced and adjacent (ections (7) and a gments (page 1, page 1), and a sof a honeycomit of Article 33(4), an	tial leakage flow through the cleator stability comprising: e having a plurality of sections Fig. 2); plurality of labyrinth sections (2 aragraph no. [0008], line 8). 3(3) as being obvious over Wie o segment.	earance between a rotating shaft (1) of a first diameter and a plurality of 5) being interleaved and adjacent eghardt. Slotted pocket segments and
